

Homework 4

David Trinh

October 7, 2024

- Question 1

1. $b^*ab^*ab^*$

2. $(ab|cd)^*$

3. $(a^*ba^*ba^*)^*$

- Question 2

start state: q_0

end state: q_0, q_5
accept: abb, bbaaab
rejected: aba, bbabab

- **Question 3**

$(aab|bba)^*$

- **Question 4**

- `\b`: Search for standalone strings (not joined to a word)
- `(?:\d{1,2})[-/](?:\d{1,2})[-/](?:\d{2,4})`:
This matches the formats MM/DD/YY, MM/DD/YYYY, M/D/YYYY, etc.
 - * `\d{1,2}` matches a 1- or 2-digit month and day.
 - * `[-/]` matches either a dash (-) or a slash (/) as separators.
 - * `\d{2,4}` matches either a 2-digit or 4-digit year.
- `(?:\d{4})[-/](?:\d{1,2})[-/](?:\d{1,2})`:
This matches the formats YYYY/MM/DD, YYYY/M/D, etc.
 - * `\d{4}` ensures we are looking for a 4-digit year at the beginning.
- `(?:[A-Z][a-z]+)(?:\d{1,2}), (?:\d{4})`:
This matches dates like May 14, 2020.
 - * `[A-Z][a-z]+` matches the month, which starts with an uppercase letter and is followed by lowercase letters.
 - * `\d{1,2}` matches a 1- or 2-digit day.
 - * `, (?:\d{4})` matches a comma followed by a 4-digit year.
- `(?:\d{1,2})(?:[A-Z][a-z]+), (?:\d{4})`:
This matches dates like 14 May, 2020. Similar to above just swapped the month and day around
- All terms above are in an OR statement.
